## RF exposure information

**FCC ID: 2AGD7TRAC** 

## 1. Introduction:

This product is an alcohol tester with Bluetooth 4.0 function operated in 2402~2480 MHz frequency band.

## 2. Output power considerations:

Worst case output power: -0.595dBm = 0.872mW (at 2440MHz)

## 3. Compliance criteria:

According to 447498 D01 General RF Exposure Guidance v05 the 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)]  $\cdot [\sqrt{f(GHz)}] \le 3.0$  for 1-g SAR and  $\le 7.5$  for 10-g extremity SAR, where

f(GHz) is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation

Calculate:

 $(0.872/5) * \sqrt{(2.44)} = 0.272 < 3$  for 1g SAR

Then SAR evaluation is not required.
